customer terminal to said securities transaction system, and

said securities transaction system is

30 programmed to perform a transaction in response to said transaction order information, and to send transaction result information indicative of said performed transaction to said securities sales system, said securities sales system being
35 programmed to produce settlement information indicative of settlement with respect to said performed transaction in response to said transaction result information and said account indication information, and

40 said account management system is programmed to settle said customer account in response to said settlement information.

2. The system according to claim 1, wherein securities sales system is programmed to store transaction condition information indicative of a transaction condition provided for said customer,
5 and to transfer said transaction order information to said securities transaction system only when said customer-requested transaction fulfills said transaction condition.

3. The system according to claim 1, wherein

09916487.073001

said customer terminal is programmed to send a customer ID for identifying said customer, and said securities sales system is programmed to
5 provide said securities information in response to said customer ID.

4. The system according to claim 1, wherein said customer terminal is programmed to send a customer ID,

and said securities sales system is
5 programmed to provide said customer terminal in response to said customer ID with customer account information indicative of at least one available account to said customer, said customer terminal being programmed to send said account
10 indication information indicative of said at least one available account selected by said customer.

5. The system according to claim 1, wherein said network is the Internet.

6. A method for performing transactions of securities comprising:

providing securities information concerning securities by a customer terminal;
5 sending transaction order information and

FOUO/07/2010

account indication information from said customer terminal to a securities sales system through a network, wherein said transaction order information is indicative of a request for
10 performing a customer-requested transaction from a customer, and said account indication information is indicative of a customer account for which said customer-requested transaction is to be requested;

15 transferring said transaction order information from said securities sales system to a securities transaction system through said network;

performing a transaction in response to
20 said transaction order information by said securities transaction system;

sending transaction result information indicative of said performed transaction from said securities transaction system to said
25 securities sales system through said network;

producing settlement information indicative of settlement with respect to said performed transaction in response to said transaction result information and said account indication
30 information by said securities sales system; and

settling said customer account in response to said settlement information..

09916487 0700
F03E20 2349T660

storing transaction condition information indicative of a transaction condition provided for said customer to said securities sales system, wherein

8. The method according to claim 6, further comprising:

sending a customer ID for identifying said customer from said customer terminal to said securities sales system in response to input to said customer terminal; and

9. The method according to claim 6, further comprising:

 sending a customer ID for identifying said
customer from said customer terminal to said
5 securities sales system in response to input to
said customer terminal; and

providing said customer terminal in
response to said customer ID with customer
account information indicative of at least one
10 available account to said customer,
sending said account indication information
in response to selection by said customer.

10. The method according to claim 6, wherein
said network is the Internet.

11. A securities sales system for performing
transactions of securities comprising:

first receiving means for receiving
transaction order information and account
5 indication information, wherein said transaction
order information is indicative of a request for
performing a customer-requested transaction from
a customer, and said account indication
information is indicative of a customer account
10 for which said customer-requested transaction is
to be requested,

transferring means for transferring said
transaction order information;

second receiving means for receiving
15 transaction result information indicative of a
transaction performed in response to said
transaction order information;

09916487.073001

producing means for producing settlement
information indicative of settlement with respect
20 to said performed transaction in response to said
transaction result information and said account
indication information.

12. The securities sales system according to
claim 11, wherein said transaction order
information is transferred only when said
customer-requested transaction fulfills said
5 transaction condition.

13. A recording medium computer-readable
recording medium storing a program for a method
which comprises:

receiving transaction order information and
5 account indication information, wherein said
transaction order information is indicative of a
request for performing a customer-requested
transaction from a customer, and said account
indication information is indicative of a
10 customer account for which said customer-
requested transaction is to be requested,

transferring said transaction order
information;

receiving transaction result information
15 indicative of a transaction performed in response
